EDUCATION

University of Toronto Mississauga — Bachelor of Science in Computer Science Expected Grad 2028

Relevant Coursework: Data Structures & Algorithms, Discrete Math, Linear Algebra, Statistics, Multivariable Calculus

Canadian Computing Competition (CCC) Senior Honour Roll — Top 100 in Canada Feb 2022

Ranked Top 100 nationally in a timed algorithmic programming competition emphasizing data structures and graph theory

PROJECTS

Gaming Analytics Dashboard — Full-Stack Data Platform & ETL Pipeline June 2025 – Present

React, TypeScript, Python (FastAPI), PostgreSQL (Supabase), Oracle Cloud VM

- Developed a full-stack data analytics platform with a React + TypeScript frontend, tracking performance metrics for **200+ users with real-time data ingestion** and interactive visualization
- Engineered a Python ETL pipeline performing **250+ API requests per cycle**, ingesting and normalizing data into PostgreSQL
- Designed a normalized relational database storing **20k+ records** with idempotent UPSERT logic
- Built scalable backend services using FastAPI with RESTful APIs and optimized data retrieval for high-frequency queries, improving system performance

Computer Vision Automation Framework Sept 2025 – Present

Python, LLaMa, OpenCV, PyAutoGUI, ctypes, PyInstaller, tkinter

- Built a desktop automation system that orchestrates UI interactions using computer vision and OS-level APIs to autonomously execute repetitive workflows
- Architected a modular automation pipeline with separated detection, decision, and execution layers, improving system reliability and maintainability
- **Reduced manual workflows by ~60%** through structured automation and event-driven control logic
- Improved decision stability by integrating a **locally hosted LLaMA model, reducing error rates by ~75%**

Embedded Temperature Monitoring System Aug 2025 – Nov 2025

C (Arduino), Microcontrollers, Analog-to-Digital Conversion

- Engineered a microcontroller-based temperature sensing system with custom-wired sensor circuitry
- Wrote embedded C firmware to interface with analog inputs and convert signals via onboard ADC
- Implemented periodic sampling logic for real-time data acquisition and output through serial interface
- Diagnosed and resolved hardware–software integration issues including noise and calibration inconsistencies
- Validated system performance through iterative testing and debugging

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL, TypeScript, JavaScript, C

Frameworks & Libraries: React, FastAPI, Node.js, Pandas, NumPy

Tools & Technologies: PostgreSQL, Docker, Linux, Git, REST APIs, ETL Pipelines, CI/CD, Data Modeling
